

Full-time Research Specialist Position: The Princeton Social Neuroscience Lab

The Princeton Social Neuroscience Lab, directed by Diana Tamir, is seeking a full-time research specialist to begin in August 2015. The lab uses functional neuroimaging, behavioral techniques, and machine learning to study the cognitive and neural basis of self-referential thought and social behaviors. To get a sense for this work, applicants can review publications here: dianatamir.com

Primary responsibilities may include: (1) managing and analyzing behavioral, web scraped, and fMRI data, (2) full stack web development, and (3) setting up and maintaining operations of the new lab.

This position is designed for an individual with a BS, BA, or MA in computer science, statistics, engineering, psychology, cognitive science, neuroscience, or related fields. Previous independent research experience in social cognitive neuroscience, strong statistical background, and programming skills would be highly desired.

To apply, please send your vita (résumé) and a cover letter to dtamir@princeton.edu. Send the document as PDFs as “[lastname]_vita.pdf” in an email with the subject line, “[your full name], RS search 2015”. Please comment on your statistical and programming experience in the cover letter. Applicants will be considered on a rolling basis.
